

Window Decal Installation Instructions

Note: Do not apply decal in temperatures less than 50° F. Do not apply in direct sunlight. This decal was designed to be applied to the outside of your BMW's windshield. To apply the decal you will need a spray bottle of glass cleaner, some paper towels and a squeegee or similar device.

PROCEDURE:

1. Park your BMW in a shady spot and thoroughly clean the windshield using a commercial spray such as Windex or Glass Plus.
2. Once the windshield is clean, spray glass cleaner over the entire area to which the decal will be applied. Leave wet. (The glass cleaner will first act as lubricant, allowing you to slide the decal around and position it where you want. Then, as it dries, the glass cleaner will enhance the bonding ability of the specially formulated adhesive.)
3. Remove about six inches of backing from one end of the decal. Place that end on one side of the wet area of the windshield. Peel off the rest of the backing and apply the decal across the wet area as you go.
4. Position the decal so it is even and centered on the windshield.
5. Starting at the center and working toward the ends, use a squeegee to remove any air bubbles from under the decal. Hold the decal as you squeegee so you don't move it out of position.
6. Let adhesive set overnight.
