# Exhaust Installation Kit Instructions

**NOTE:** These instructions are for BMWs with two pipes at the converter-to-muffler connections (twin pipes out of converter and through muffler)

## 3 Series

thru 98 with 6-cylinder  
(except 325e thru 87)

### PURPOSE:

Many BMW models require the reuse of one of the catalytic converter connection flanges, which is not included in the Exhaust Installation Kit (EIK).

## 5 Series

thru 98  
(except 528e thru 87)

### DETAIL:

Most BMW models that have two exhaust pipes coming out of the catalytic converter and into the muffler, have a free sliding connection flange on one of the converter or muffler pipes. The pipe that the flange is on will not have a flare on the end. In these applications, this flange must be removed and reused.

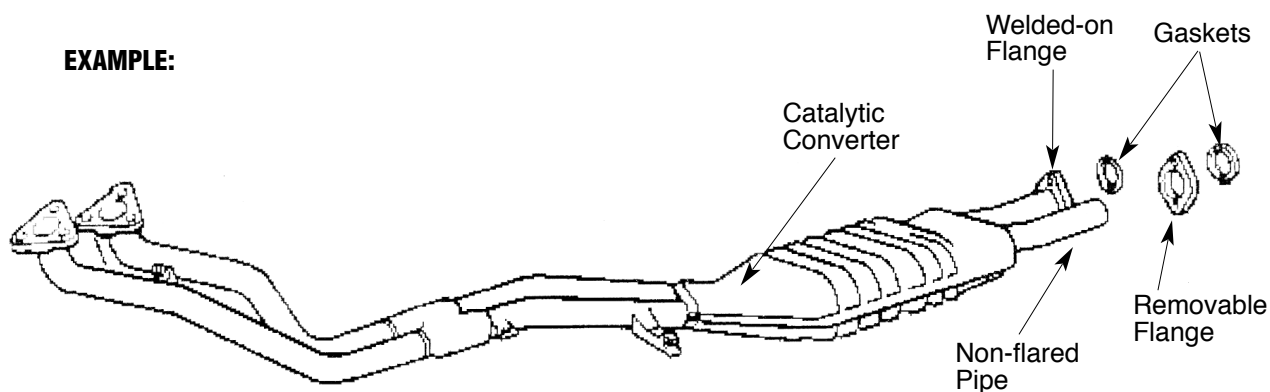

## 6 Series

If there is too much corrosion to readily slide the flange off the pipe, the corrosion must be cleaned off so that the flange can be removed. If needed, new flange plates are available from Bavarian Autosport.

## 7 Series

thru 94
